

Shepherd Engineering (Anglian) Ltd AWARDED SILVER!

Shepherd Engineering (Anglian) Ltd is an independently owned, family business situated in Suffolk since 2001. It is a mechanical and electrical engineering company working within the water pumping and sewage industry, and operating throughout the UK.

How did Shepherd Engineering achieve the Silver award?

- Reduced electricity consumption at the workshop and out on site through effective maintenance and upgrade schedules. Also upgraded to LED lighting in the workshop.
- FSC timber and paper products routinely sourced (and Chain of Custody provided to clients on request) with significant decline in paper use in the office.
- Significant reductions in vehicle emissions have been achieved over the recent annual period through teleconferencing and working from home by management. Teleconferencing will be maintained for all but essential travel and overnight stays will be re-introduced for engineer journeys of over 2 hours.

"This is a topic that touches all businesses. We are extremely pleased to be able to show that we are doing our bit and are being recognised for it with the Charter award"
