

Cleaning Smart come in at Bronze

Cleaning Smart offers commercial cleaning services for offices, schools, medical facilities, end of tenancy cleaning and more. They customize their services to specific business requirements, offering one-off cleans to contracted rates at frequencies that suit. Where possible they use environmentally friendly products as part of their commitment to the environment.

Cleaning Smart's path to bronze:

- **Premises and Waste:**
 - Cleaning Smart have calculated and monitored their Scope 1 carbon emissions.
 - Billing, payment slips and employment forms are electronic - reducing paper use.
 - Waste is segregated with as many materials recycled as possible.
- **Materials and Delivery:**
 - They look to source environmentally friendly products (washable, biodegradable, compostable etc.) for their services wherever possible.
 - Concentrates are purchased where possible with reusable dispensers to reduce waste.
 - Routes to jobs are planned in order to minimise their distance travelled.
- **Staff Training and Policies:**
 - Their staff are trained with specific methods to minimise environmental impact.
 - They have produced an Environmental Policy with a clear Environmental Action Plan detailing actions and outlining realistic target completion dates, current progress and the member of staff responsible for the action.
- **Outreach:**
 - Cleaning Smart has a Blog page which sometimes posts articles related to the environment.

"At Cleaning Smart we are always making efforts to limit the damage done to the environment and see this as a really important focus. We want to make our cleaning as green as possible. We are really pleased with our Bronze level Carbon Charter Award and are already looking at further steps we can make to continuously reduce our carbon impact."
