CARBON REDUCTION CASE STUDY

Diamond Controls' journey to become recognised as a Silver Level Carbon Charter Award Member

Diamond Controls is an industry-leading, ISO-accredited leak detection and trace heating systems specialist, established over 20 years ago.

"We're incredibly proud to have been awarded the silver level at our first application with the Carbon Charter. Our move to new, larger premises in December 2024 gave us the ideal opportunity to invest in our building infrastructure so that we can directly influence the carbon emissions we produce as a business."
Iain Ames, Diamond Controls

✓ Energy-Efficient Office Upgrades

Diamond Controls office has been retrofitted with smart lighting, modern heating controls and improved insulation to enhance efficiency.

✓ Renewable Energy Investment

Installing on-site solar panels helps generate renewable energy and reduce annual emissions.

✓ Electric Vehicle Charging

Installing two EV charging points, supporting lower-emission transport and encouraging the move towards electric vehicles.

✓ Sustainability Engagement

Joining the Supply Chain Sustainability School and achieving the Waterwise Checkmark demonstrates the company's commitment to responsible environmental practices.
